

OPTI NEWS

Freezer Spacer Removal made Easy.

Remove freezer spacers and exchange pallets safely and efficiently with Optimum's "FSR" Freezer Spacer Remover machine.

Optimum's industry proven "FSR" system operates at an ergonomic working table height to allow simple pallet replacement and freezer spacer removal. By simply tilting the loaded pallet to a horizontal position this allows freezer spacers to be removed up to 90% faster than stacking or restacking boxes by hand—a "must have" item for all frozen food, cold storage, abattoirs and poultry processing facilities.

Built to handle the rugged demands of the frozen food and cold storage environments this machine is powered by a durable electric/hydraulic power pack that is operated by easy to use dual hydraulic lever controls. With an ultra-low profile platform, ground level entry with a manual or electric pallet truck is easy. In addition, the large jaw opening makes loading and unloading with powered forklifts a breeze. The "FSR" machine comes standard with side and rear fence guarding for added operator safety.

For the higher volume and more automated sites, Optimum offers a conveyor fed inline systems that transit pallets into the "FSR" for freezer spaces/product separators to be removed. Pallets are then discharged at 90° into an automatic stretch wrapper for the final process before despatch, reducing pallet handling by more than 50%.

Optimum's "FSR" units increase productivity in a huge way and creates a positive work place environment by reducing operator fatigue and injury often associated with constant frozen carton handling – contact the Team on 1800 066 008 to discuss your requirements.
