

HIGH SPEED PALLET DISPENSER

PALLET DISPENSER PD90

Minimize risks of back injuries caused by manually removing empty pallets from a stack. Our Pallet Dispensing Machines stack or dispense wood pallets, plastic pallets, aluminum pallets, metal pallets, export pallets and rental pallets, performing quickly and efficiently while avoiding employee injury.

The Optimum PD90 High Speed Double Pallet Dispenser dispenses 2 pallets to the floor without manual handling. Automatic operation includes a keyed selector switch for manual override. 4 Pallet storage magazines with swing gates hold up to 90 pallets. Cycle time is 12-14 pallets per minute.

- ✓ Double-deep pallet dispenser is used at distribution centers & warehouses to aid order selectors with pallet handling.
- ✓ Fully automatic and works with double-deep electric or rider pallet trucks
- ✓ Holds up to 90 pallets and are filled from the front & back sides
- ✓ Front and rear swing gates prevent pallets from tipping out and disable operation when open
- ✓ Consists of two independently working single units attached together, with shared electrical and magazine components, saving on costs but improving functionality
- ✓ Remove one or two pallets and continue to work if one unit is empty but not the other
- ✓ Heavy-duty construction, Certified electrics & precision hydraulics offer low maintenance and increased uptime
- ✓ Integral pallet aligners and a side squeeze mechanism reduce "trip offs" when using co-mingled stacks of stringer, block or damaged pallets

Model	Capacity	Power	Overall Height	Base Size	Cycle Time
PD90	90 pallets	3 phase 415V	6180 mm	2460 x 2750mm	10 sec

> Robust lifting and clamping mechanism

> Certified electrics

> Swinging gate for operator safety
