

Concertina Safety Skirt

OVERVIEW

If safety is your number 1 priority and your sites working conditions are dusty and corrosive then a concertina safety skirt will provide the protection every scissor lift and your personnel need.

We provide a wide selection of custom and standard scissor lift table skirts. Our Skirts are designed to protect both the operator from injury, and the internal mechanisms of the lift from dust and debris. They are constructed of a heavy duty vinyl, attached by either bolts or velcro attachment. These skirts will hold up to the rigors of high duty cycling and debris filled environments.

BENEFITS & FEATURES

Superior Performance

- ✓ Vent panels can also be included as part of the skirts features. These panels provide the scissor lift table skirt with the proper ventilation, as the lift raises upward, through its stroke. The vent panels will prevent the bellows from creating a suction, thus deforming the skirt, as it expands.

Industrial Strength

- ✓ Our lift table skirts are also designed with industrial strength vinyl, which better resists tearing and ripping. Our stitched skirts use flame retardant vinyl coated polyester, sewn with polyester thread.

Easy Maintenance

- ✓ All of our scissor lift tables skirts can be equipped with maintenance straps, that hold the skirt in the raised position. This allows for easy installation and maintenance of the lift, when in the raised position. These straps feature snap together design, which is fast, efficient and reliable.
